

IJL 205

**Small Project Estimating, Scheduling and Cost Control**

IJL 205  
Small Project Estimating, Scheduling and Cost Control  
2 Day Workshop  
\$895 (course fee) + \$99 (manual fee)

## **Learning Objectives**

---

After completing this workshop you will be able to:

1. Understand small project management concepts and risks.
2. Define scope of work to ensure project success (Control).
3. Explain the role of the job Coordinator (case study reinforced).
4. Apply small project cost and control elements.
5. Apply integration of construction Coordination and cost control systems.
6. Apply the elements and processes of estimating.
7. Consider the long term versus the short-term costs of implementing a job or task assuming many conditions.
8. Use the philosophy of estimating the net value to the company when choosing the resources to complete a job.
9. Better able to design and control job workflow and resource allocation.
10. Identify and control risks in small projects.
11. Apply basic project control methods to impact deliverables such as implementation costs, time and quality.
